

Error 103: Secure code

Built for development teams. Drawn from the mistakes I keep seeing in the codebases I pentest, plus lessons from the years I spent developing myself. Tailored to your stack and team.

ABOUT THE TALK

As a pentester I read other people's code every single week, and the same mistakes show up again and again. Not because developers are lazy, but because security is rarely part of everyday work until something goes wrong. This talk takes the most common vulnerabilities I find in real codebases and shows both how they're exploited and how they're avoided.

I have a background as a developer myself, so this is not a finger-wagging talk. It's a colleague showing you the attacker's perspective on the code you write.

What your team takes away

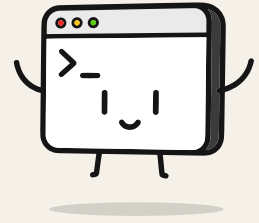

- The most common vulnerabilities I find in pentests, with real (anonymized) examples
- How an attacker thinks when reading your code and your APIs
- Concrete habits and tools that catch the mistakes before they reach production
- What's actually worth spending time on, and what's just noise

How the session is structured

The talk runs about 45 minutes and can be extended with a hands-on workshop where we look at examples in your own stack. The content is tailored in advance: your languages, frameworks and maturity level decide which examples I bring.

Practical details

Built for development teams, tech leads and architects. Delivered in Norwegian or English, at your office or remote. Tell me what you're building and I'll tailor the rest.

SUITED FOR

Development teams · tech leads

Tailored

Dev teams

45 min

PRACTICAL

- On site or online
- Norwegian or English
- Adapted to the audience and industry
- Enquiries answered the same day

200+ talks · 4.9 out of 5 on average

«The talk Daniel gave for us at Big Bite of Tech, in a packed room of 195 participants, was the most popular talk of the entire programme, with a feedback score of 4.91/5.»

Ulf Rasmussen, Palo Alto Networks
